How to publish a talk on memo

Slides on the left, what you said on the right.

A deck alone loses the argument

deck.pdf	recording	talk page
slides: yes	both: yes	both: yes
your words: no	skimmable: no	skimmable: yes

A PDF keeps the slides and drops your words. A recording keeps both, and nobody skims 40 minutes.

One page: slide left, notes right

Each slide starts a segment with its notes beside it; on a phone they stack.

One folder per talk, beside the post

```
publish-a-talk.md
assets/publish-a-talk/
  slides/slide-01..13.webp
  deck.pdf
  og.png
  deck-src/      optional
```

- long edge 1600, 200 KB each
- page count = slide count
- share card, 1200x630
- editable source

Frontmatter: one layout line, one deck

```
layout: talk
image: /content/<path>/assets/<slug>/og.png
talk:
  deck: assets/<slug>/deck.pdf
  event: "OGIF, Da Nang"
  given: 2026-11-03
  source: deck-src/
  video: <YouTube id>
```

required

optional

where, when, source, video

The body is plain Markdown

```
## The files

![What the slide says](slide-04.webp)

What you said while it was up.

...

---

Links, credits, the recording.
```

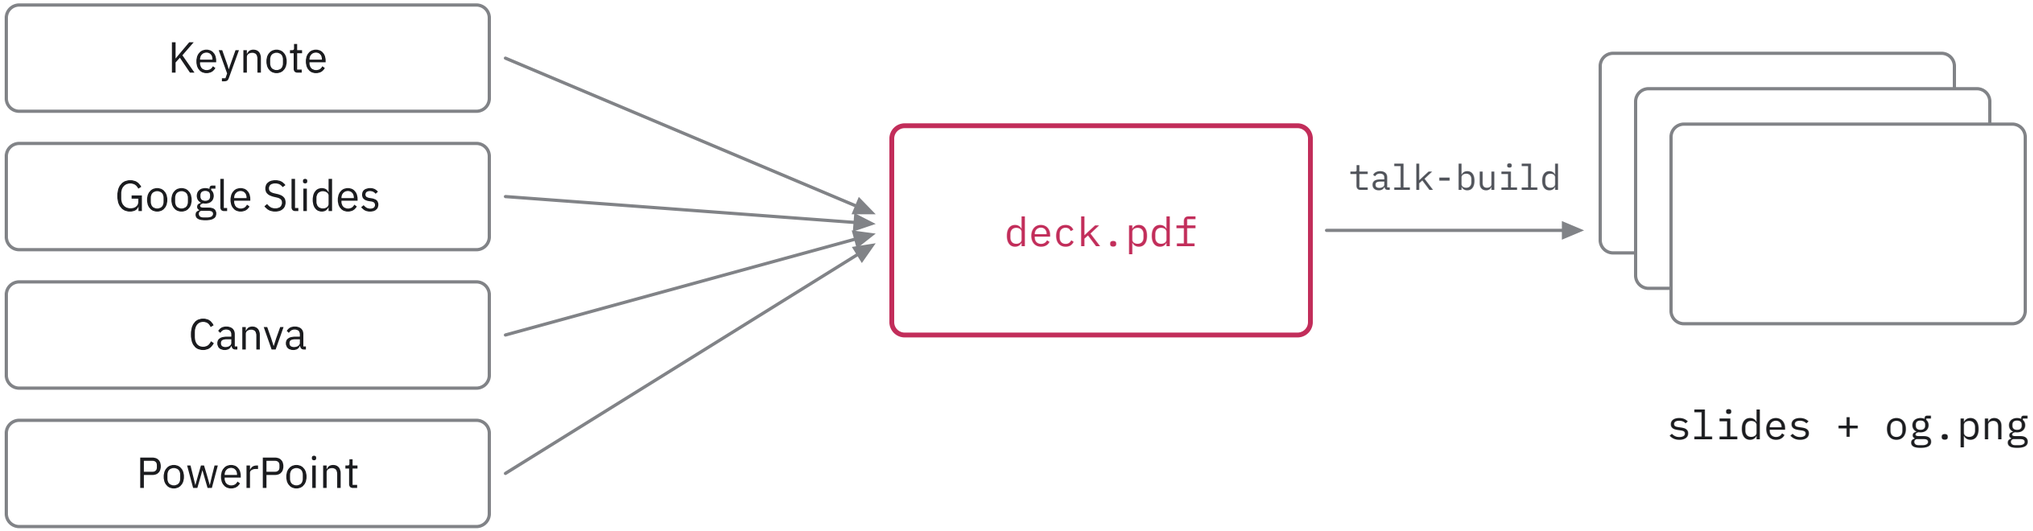

- `## The files` → section title
- `![What the slide says](slide-04.webp)` → starts a segment
- `What you said while it was up.` → notes, right column
- `---` → outro

Path A: write each slide as HTML

One file per slide on the memo theme. This deck is 13 HTML files and one stylesheet.

Path B: export a PDF from any tool

Keynote, Google Slides, Canva, PowerPoint: 16:9, 16:10 or 4:3, one page per slide. Your own look stays.

talk-build does the boring part

```
node _meta/scripts/talk-build.mjs handbook/memo/publish-a-talk.md
```

One run on this deck takes about 20 seconds: 13 HTML slides in; a PDF, 13 webp files and a share card out.

The script checks eight things

T1 deck pages = slides	T2 slide-01..NN, in order	T3 8 to 40 slides	T4 alt says the slide
T5 one ratio, 200 KB	T6 15 to 150 words of notes	T7 2 to 8 sections	T8 share card 1200x630

The editor checks six

J1	Skim test: the slides alone carry the argument
J2	One idea per slide, about 25 words
J3	Notes add what the slide cannot
J4	One visual language within the deck
J5	Slide 1 names you; the last gives the takeaway
J6	A linear argument, not a reference doc

Put the argument on the slides and the evidence in the notes.
