How to publish a talk on memo

Slides on the left. What you said, on the right. One page a reader can skim.

Han Ngo

A deck alone loses the argument

deck.pdf	recording	talk page
slides: yes	both: yes	both: yes
your words: no	skimmable: no	skimmable: yes

A PDF keeps the slides and drops your words. A recording keeps both, and nobody skims 40 minutes.

One page: slide left, notes right

Each slide starts a segment. Your notes sit beside it. On a phone, the notes drop under the slide.

One folder per talk, beside the post

Frontmatter: one layout line, one deck

```yaml
layout: talk
image: /content/<path>/assets/<slug>/og.png
talk:
  deck: assets/<slug>/deck.pdf
  event: "OGIF, Da Nang"
  given: 2026-11-03
  source: deck-src/
  video: <YouTube id>
```

required

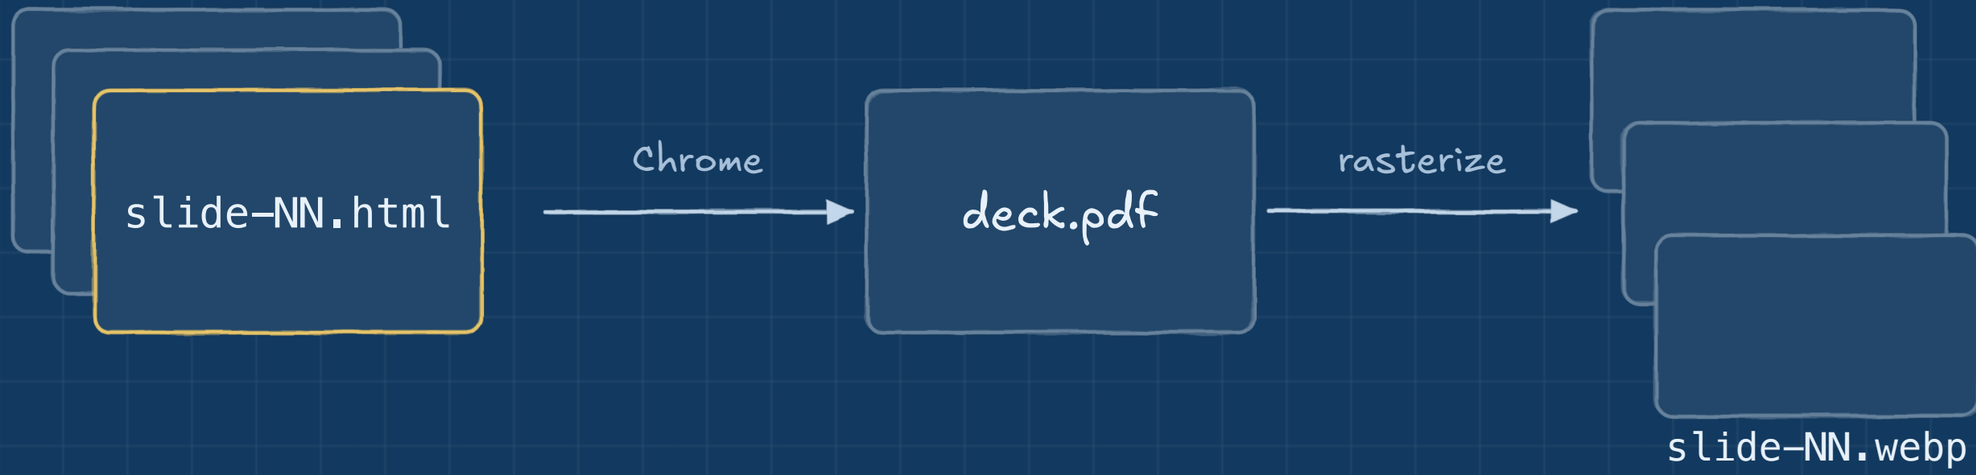

optional

where, when, source, video

The body is plain Markdown

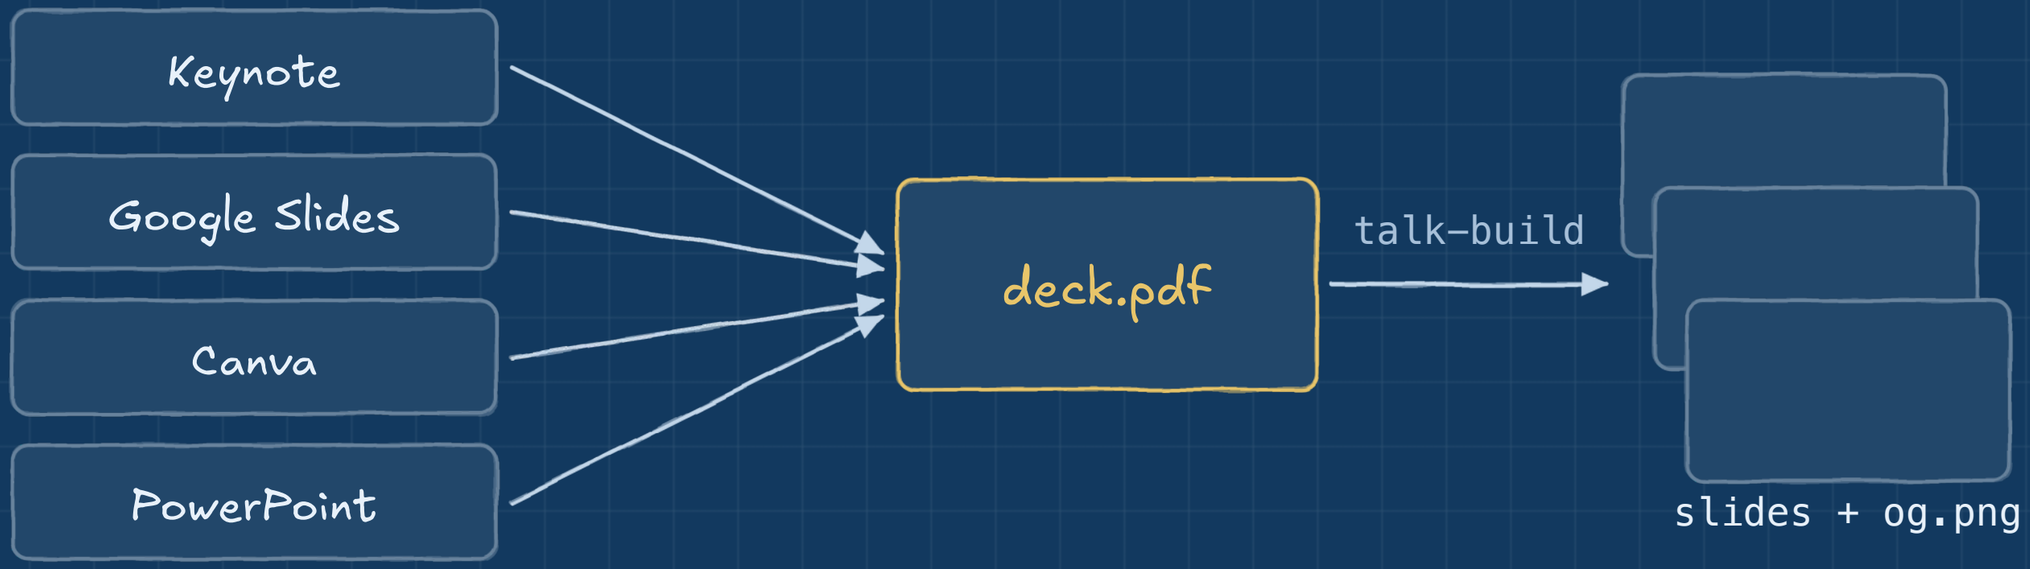

```
## The files                                  → section title
![What the slide says](.../slide-04.webp)    → starts a segment
What you said while it was up.               → notes, right column
...
---                                          → outro
Links, credits, the recording.
```

Path A: write each slide as HTML

One file per slide at 1600 by 900. This deck is 12 HTML files and one stylesheet.

Path B: export a PDF from any tool

Keynote, Google Slides, Canva and PowerPoint all export PDF. Keep it 16:9, one page per slide.

talk-build does the boring part

```
node _meta/scripts/talk-build.mjs handbook/memo/publish-a-talk.md
```

One run on this deck takes about 40 seconds: 12 slides in, each webp between 38 and 50 KB.

The script checks eight things

T1
deck pages = slides

T2
slide-01..*NN*, in order

T3
8 to 40 slides

T4
alt says the slide

T5
1600×900, 200 KB

T6
15 to 150 words of notes

T7
2 to 8 sections

T8
share card 1200×630

The editor checks six

J1	Skim test: the slides alone carry the argument
J2	One idea per slide, about 25 words
J3	Notes add what the slide cannot
J4	One visual language across the deck
J5	Slide 1 names you; the last gives the takeaway
J6	A linear argument, not a reference doc

Put the argument on the slides and the evidence in the notes.
